

5.5-5.6 Quiz Review

Key

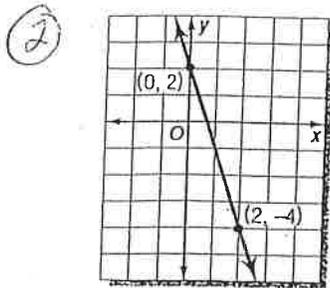

Directions: Identify the slope, y-intercept, and equation for each graphed line. Place your answer on the lines provided. All slopes must be simplified.

Slope: $\frac{4}{2} = \frac{2}{1}$

y-intercept: -3

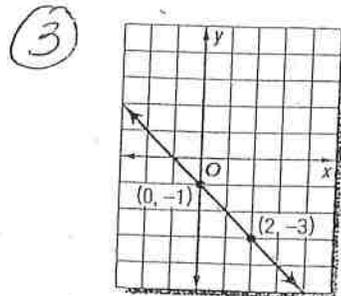

Equation: $y = 2x + -3$

Slope: $\frac{-6}{2} = -3$

y-intercept: 2

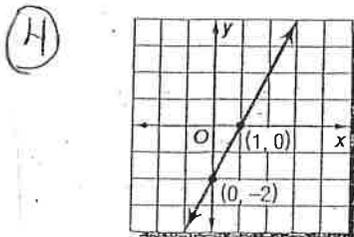

Equation: $y = -3x + 2$

Slope: $\frac{-2}{2} = -1$

y-intercept: -1

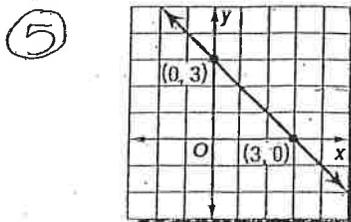

Equation: $y = -1x + -1$

Slope: $\frac{2}{1}$

y-intercept: -2

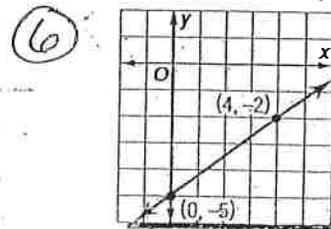

Equation: $y = 2x + -2$

Slope: $\frac{-3}{3} = -1$

y-intercept: 3

Equation: $y = -1x + 3$

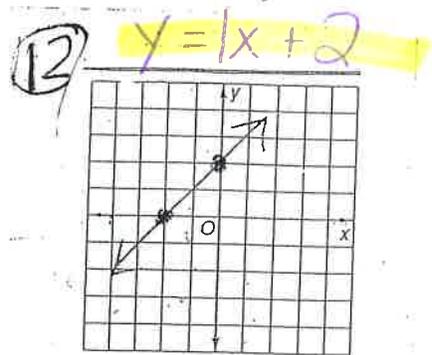

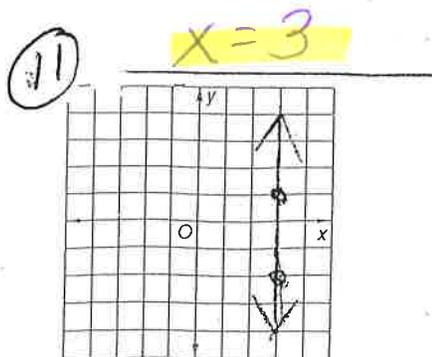

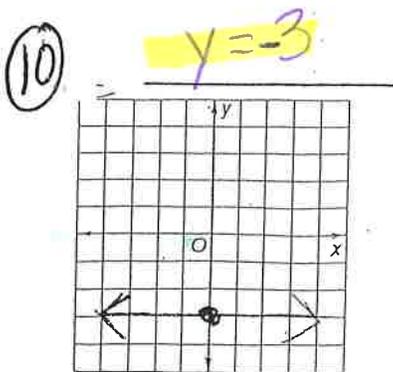

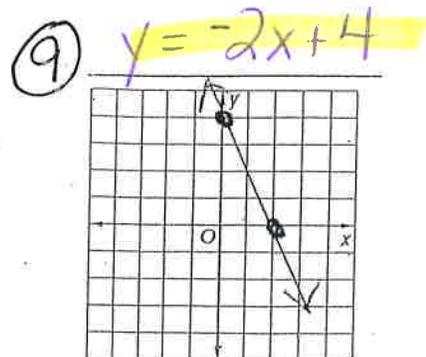

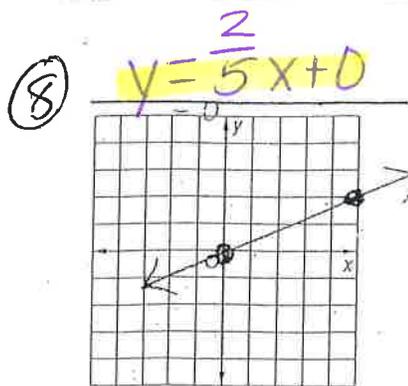

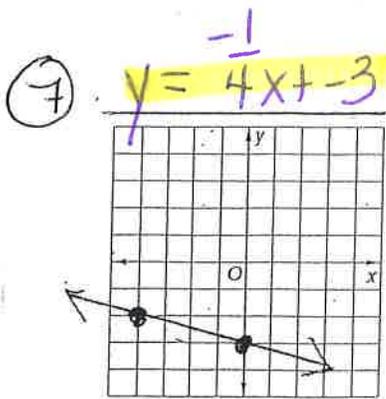

Slope: $\frac{3}{4}$

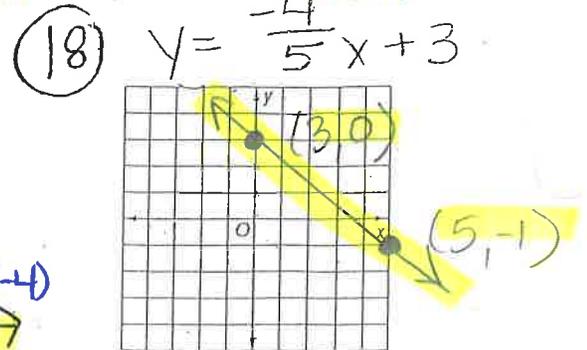

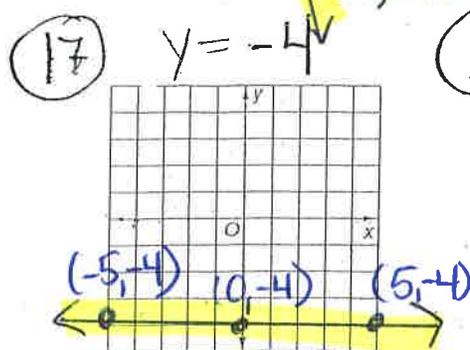

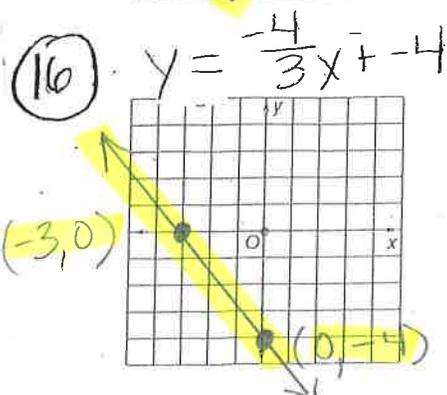

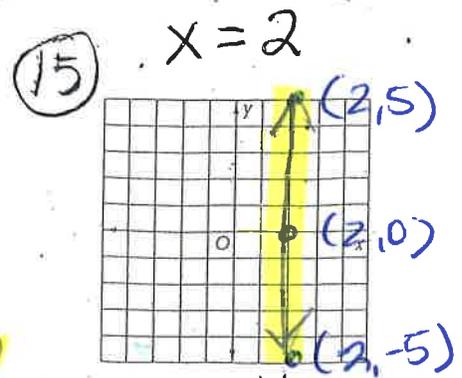

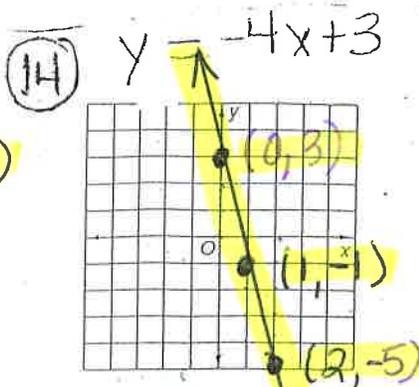

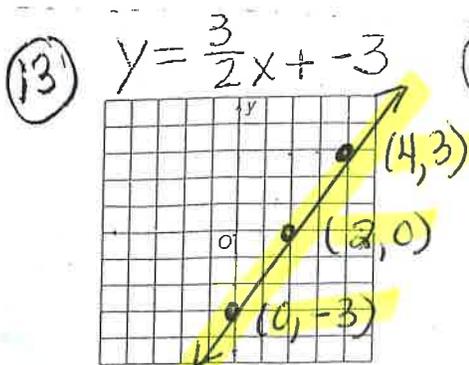

y-intercept: -5

Equation: $y = \frac{3}{4}x + -5$

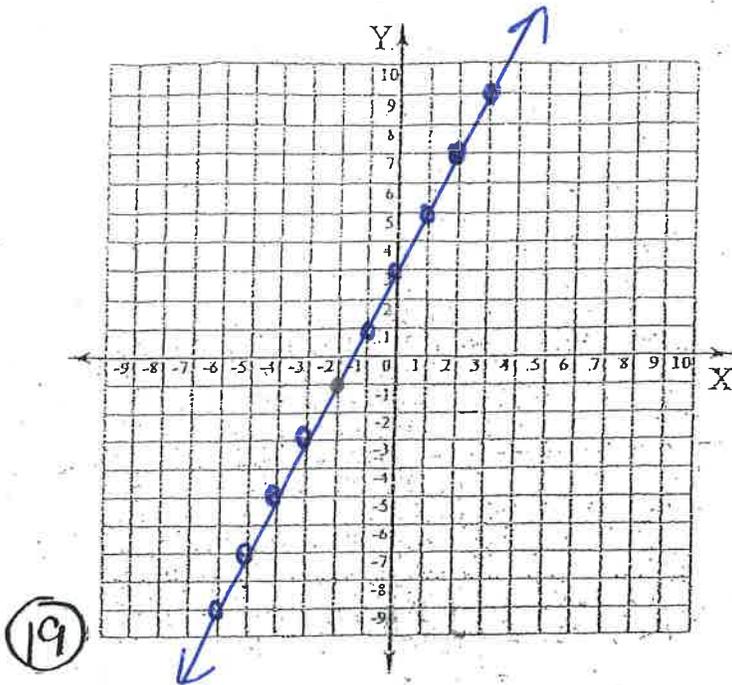

Directions: Write an equation in slope-intercept form ($y = mx+b$) for each line shown in the graph.

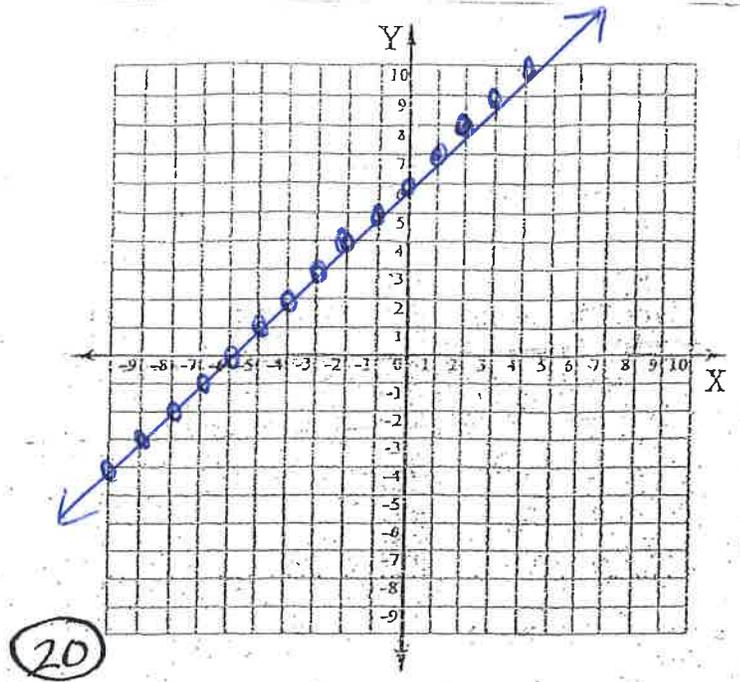

Directions: Graph each equation. Keep graphing ordered pairs across the ENTIRE coordinate plane. Label AT LEAST 3 ordered pairs.

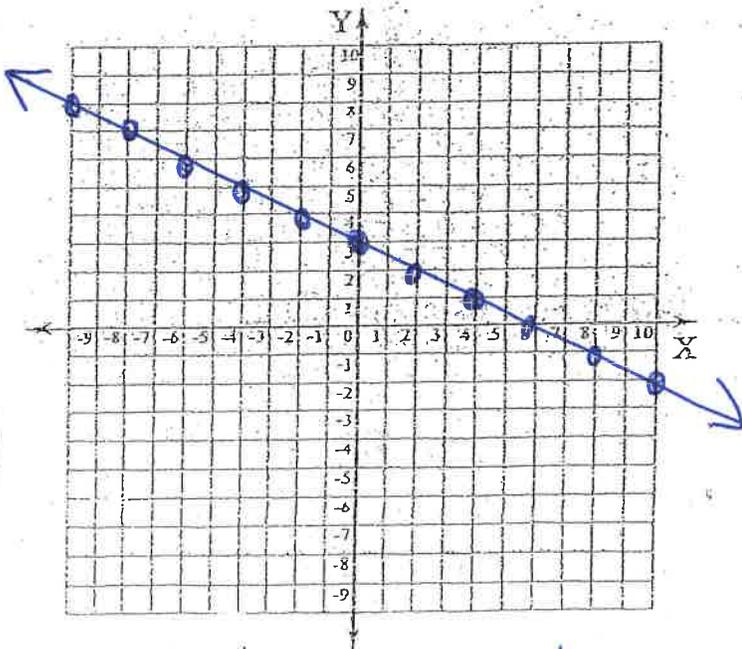

Directions: Graph the following equations, given the ordered pairs. Then write the equation on the graphed line.

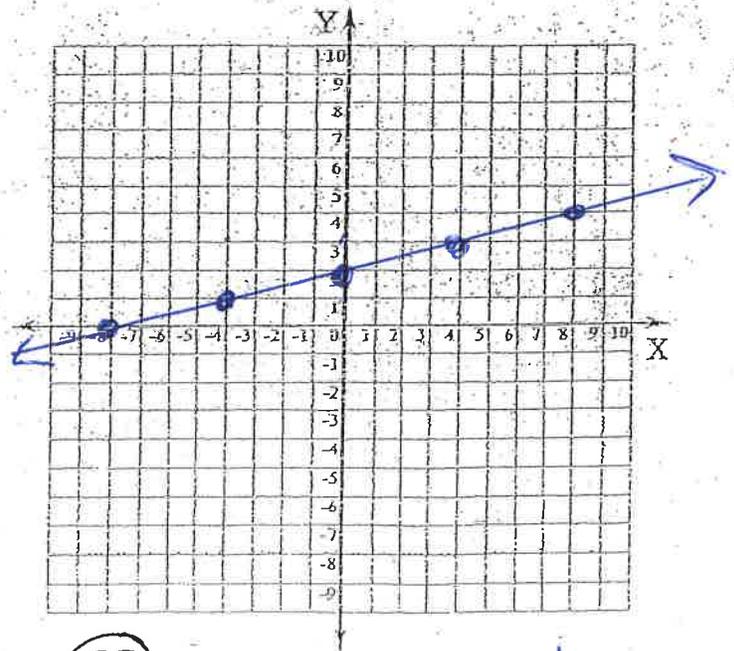

$(-1, 3)$ and $(2, 7)$ Equation: $y = 2x + 3$
 $(-2, -1)$

$(-2, 4)$ and $(2, 8)$ Equation: $y = x + 6$

$(0, 3)$ and $(4, 1)$ Equation: $y = -\frac{1}{2}x + 3$

$(0, 2)$ and $(4, 3)$ Equation: $y = \frac{1}{4}x + 2$
